  Full-time, Miami, FL, 2003–2006
- **ART DIRECTOR & WEB DESIGNER, TBWA-CHIAT DAY**
  Full-time, London UK, 1998-2000

BIOGRAPHY

Art Director in Miami. Moved to London, England and worked at top ten Ad agency TBWA (Omnicom). Early 2000s moved to UI/UX Design.

When UX design is good it seems simple and inevitable. Love reducing UX complexity to UX delight. Also highly productive; you need 5 versions for meeting tomorrow? No problem. Like my Bézier curves perfect.

Highly proficient with Figma, Adobe CS, including InDesign, Sketch, Axure, Bootstrap. Loving new Affinity Creative Suite tools.

EDUCATION

- Miami International University of Art & Design (IFAC), 1987, Miami, FL, AA Degree, Commercial Art,
- Trent College, 1984, Long Eaton, UK

'Harry Potter' school in England 😄
Received Art Scholarship.
Played Rugby for my county.

Florida Lottery logo used for presentation purposes only

A lottery platform
for the digital age

mLotto™ is the end-to-end solution that ushers state lotteries — and their games — into the age of the mobile web. Powered by a national leader in consumer-to-government payments, mLotto creates an enivornment where gameplay is not only intuitive and fast, but also in full compliance with state and federal guidelines.

As a white-label platform, mLotto allows each lottery to maintain the integrity of its brand while dramatically expanding its reach online or on the mobile web. mLotto's development capability and customer service engine ensure that this is accomplished with little to no effort by the agency. This makes mLotto a safe bet for any lottery.

"Nearly half of all Americans — 46% — own a smartphone."
mLotto gives your lottery the tools to reach this population, and the technology to convert them effectively.

mWallet

With the latest in payment processing technology and a comprehensive licensing and compliancy apparatus, mLotto creates convenience for the lottery customer while ensuring security for the lottery agency. Depending on individual state regulation, the mWallet can be funded using a credit/debit card, ACH transfer, and/or cash. mLotto adheres to PCI data security standards, is a registered Money Services Business (MSB), and holds money transmission licenses in each applicable state.

Customer Service

While the payment process is designed to be as seamless and intuitive as possible, customers also have access to 24 hour support through an in-house call center. mLotto adheres to responsible gaming standards at every consumer touchpoint, including online, through the mobile app, and in the call center.

Geolocation

When accessed through a mobile device, the application automatically detects the player's location using the Global Positioning System (GPS) embedded in the mobile device. This process ensures that no lottery tickets are purchased outside a participating state's borders in violation of federal law.

Age Verification

Players must be of age to complete registration and play a game. During mobile gameplay, age is verified using the mobile device's camera to capture an image of the 2-D barcode on the player's driver's license. The app then validates the information from the scanned barcode, granting (or denying) the player access.

Pool Play

Social integration enables Pool Play for all games and acts as a springboard for viral adoption.
